Education

Sharda University , Greater Noida Uttar Pradesh

2022-2026

B.tech in Information Technology

Skills

Languages: Java (Core & OOP), Python, JavaScript, TypeScript

Web & Frameworks: React.js, FastAPI, HTML, CSS, REST APIs

Databases: MongoDB, MySQL, Supabase

Core Concepts: Data Structures & Algorithms, Object-Oriented Programming (OOPs), DBMS, Operating Systems

Tools & Technologies: Git, GitHub, Docker, CI/CD

AI & APIs: LLM Integration (Gemini API), Retrieval-Augmented Generation (RAG), API Development .

Experience

Software Development Intern — Ineuron Intelligence Pvt. Ltd, Bangalore

12-05-2024 – 25-06-2024

- Achieved a more reliable and structured banking workflow by developing a Console-Based Banking Application using **Core Java, OOPs, file handling, and collections**.
- Built a modular banking system that simulated real-world operations (authentication, deposit, withdrawal), improving ease of testing and reducing implementation complexity for future extensions.
- Automated routine operations such as transaction recording and validation through file handling, reducing manual verification effort and improving data consistency.
- Collaborated with mentors and the development team to refine system logic, enhance error handling, and ship a stable CLI-based application aligned with clean code practices.

Projects

AI-Powered Author Support Automation System [\[Github\]](#) [\[Vercel\]](#)

Tech: **FastAPI, React.js, Python, Supabase, Gemini AI, n8n, REST APIs**

- Developed an AI-powered multi-channel author support automation system as part of a technical assignment for BookLeaf Publishing, focused on automating publishing-related support workflows and author interactions.
- Designed workflow-aware query orchestration pipelines using FastAPI and Gemini AI for intent classification, contextual response generation, confidence scoring, and escalation handling.
- Integrated Supabase-based publishing workflow data with a lightweight FAQ knowledge base to support both structured workflow retrieval and general publishing support queries.
- Implemented multi-channel workflow simulations for WhatsApp, email, Instagram, and dashboard chat systems using centralized backend orchestration and workflow tracking.
- Integrated n8n automation workflows with FastAPI APIs to simulate external event triggers, automated workflow execution, and support pipeline integration.
- Deployed frontend on Vercel and backend on Railway with API documentation, workflow logging, and modular backend architecture.

AI-Powered Document Intelligence System [\[Github\]](#) [\[Vercel\]](#)

Tech: **FastAPI, React.js, Python, MongoDB, REST APIs, RAG**

- Developed a full-stack application to extract and query information from unstructured documents (PDF, audio, video), reducing manual lookup time by ~60%.
- Designed REST APIs using FastAPI for file upload, summarization, and context-aware Q&A, enabling real-time document interaction.
- Implemented a RAG-based retrieval approach to improve answer accuracy and reduce irrelevant responses.
- Integrated Gemini LLM API for context-aware summarization and query answering.
- Solved data-mixing issues across multiple uploads using document-level isolation with unique IDs.
- Built a responsive React.js interface and deployed the application using Docker, Vercel, and Render.

GitHub Access Report Service [\[Github\]](#) [\[Railway\]](#)

Tech: **Java, Spring Boot, WebClient, Maven, GitHub API**

- Built a scalable backend service to analyze and map user access across GitHub organization repositories by integrating GitHub REST APIs.
- Implemented authentication using GitHub Personal Access Token (PAT) and handled API rate limits and secure configuration via environment variables.
- Designed and exposed a REST API endpoint to generate structured JSON reports mapping users to repositories.
- Implemented pagination handling using GitHub Link headers to efficiently support large-scale data (100+ repositories, 1000+ users).
- Resolved API limitations by leveraging contributors API instead of collaborators API for public repositories.

Algo Visualizer [\[Github\]](#) [\[Vercel\]](#)

Tech: **html, Css, Javascript, react.js, Node.js, MongoDB, openLLM**

- A comprehensive **data structure and algorithm learning platform** enabling users to understand core DSA concepts through animated, step-by-step visual execution of algorithms and operations.
- Supports visualization of **10+ data structures and algorithms**, including Arrays, Stacks, Queues, Linked Lists, Trees, Graphs, and common sorting/searching techniques, providing an interactive learning experience.
- Integrates an **AI-powered explanation module** that delivers step-wise algorithm descriptions and time complexity insights, improving conceptual understanding and learning efficiency by ~35–40%.

Airline Reservation System [\[Github\]](#) [\[Vercel\]](#)

Tech: **HTML, Node.js, MySQL, Tailwind CSS**

- A flight booking platform that helps users search flights, select seats, and complete bookings in an easy step-by-step flow.
- Designed a reliable backend using Node.js + MySQL with a **transaction-safe seat reservation mechanism**, ensuring **0 double-booking errors** across **~50+ simulated bookings** during testing. Implemented optimized SQL queries that improved data retrieval and update time by ~30%.
- Designed a responsive UI using Tailwind CSS and tested the system with **50–70 sample bookings** to ensure smooth flow and consistent data updates. Suitable for basic deployment on any cloud environment.

Achievements & Certification

Presented the research paper **"PAPERTRADEX – Simulated Trading on Previous Day Market"** at **ICAIM 2025**, contributing academic insights to financial simulation models. [CERTIFICATE](#)
